

# FOREST MANAGEMENT

**Directions:** Compare two different forest areas: one managed by a forester or landowner, and one that is unmanaged. Use this Venn diagram to compare the two areas.

## Did You Know?

Forest management is the process of humans caring for a forest so it remains healthy and provides desired benefits.

**Question:**

Looking at both forest areas, does one appear to have healthier trees? If so, which one? Why? (Keep in mind that trees need enough sunlight, water, soil nutrients and space to stay healthy.)
